## Purpose

This document serves as an overview of the size and characteristics of the Federal civilian workforce, enabling reporters, external analysts, and the general public access to commonly requested descriptive information.

This document will first cover the limitations and nature of the federal employment data that OPM regularly posts on the web. It will then describe commonly used definitions and outline their implications. Lastly, it presents some basic data, in the form of tables and graphs, to offer some insight into the current and historical composition of the Federal Government.

## Introduction

As a prerequisite to analyzing and interpreting the OPM's employment data, one must understand (a) the coverage of the OPM's databases, (b) the various types of employment, (c) the basic trends in Federal employment, and (d) the common practices of the Data Analysis Group (DAG). The validity and accuracy of inferences drawn from OPM statistics will depend heavily on these four items.

## Coverage

The OPM houses a human resources database, the Enterprise Human Resources Integration (EHRI). Production data are typically released every month. "Status" data (cross-sections; used for total employment aggregates) are available one to two months after the end of each month. "Dynamics" data (all personnel actions; used for hiring numbers, retirement figures, etc.) require more time, approximately four months from the end of a particular month, to become production data because of the late actions, cancellations, and corrections, which Status data do not have.

Often, OPM coverage is equated to the Federal Executive civilian workforce. The coverage is in fact exclusively Federal and exclusively civilian, but the data exclude a few major components of the Executive Branch (most notably the Postal Service and many intelligence agencies) and include some pieces of the Legislative Branch. For specific exclusions and inclusions, visit FedData on the OPM's website: http://www.opm.gov/policy-data-oversight/data-analysis-documentation/federal-employment-reports/\#url=SDM. One final point about personnel coverage, OPM data do not include contractors.

In addition to who the OPM covers, it is also helpful to know what the OPM collects. The EHRI contain over 100 different variables, or data elements, for each employee. The vast majority of these elements pertain strictly to employment. Items such as marital status or residence are not gathered. In accordance with the Freedom of Information Act (FOIA), most of the OPM's data are public information, even data at the individual level. Certain exclusions apply, however. Visit http://www.opm.gov/information-management/freedom-of-information-act/ for more information including requesting individualized data. Requests that are not specific to certain employees can be handled through FedStats@opm.gov. For the complete guide to what elements OPM data include, visit http://www.opm.gov/policy-data-oversight/data-analysis-documentation/data-policy-guidance/\#url=Data-Reporting-Guidance.

## Types of Employment

Each Federal employee has a particular work schedule, type of appointment, tenure, and appointment authority, among other variables, which dictate the "type" of his or her employment. These variables have many levels and definitions. Collectively, however, they lead to six types of employment. ${ }^{1}$

- All employees: this category includes all Federal employees.
- Permanent (P): this category includes all employees hired with no absolute end date.
- Full-time (FT): this category includes all employees working a 40-hour work week.
- Full-time Non-seasonal (FTNS): this category includes all employees working a 40-hour work week yearround.
- Full-time Permanent (FTP): this category includes all employees working a 40-hour work week with no absolute end date.
- Non-seasonal Full-time Permanent (NSFTP): this category includes all employees working a 40-hour work week year round with no absolute end date.

Each category carries very different characteristics. Most notably, the employment type heavily affects count and salary statistics, which also happen to be the most commonly requested statistics. To understand the magnitude of these differences, see TABLE 1. TYPES OF EMPLOYMENT.

TABLE 1. TYPES OF EMPLOYMENT
Statistics for all types of employment from all quarters of FY2013
EMPLOYMENT

| EMPLOYMENT TYPE | DEC2012 | MAR2013 | JUNE2013 | SEP2013 |
| :--- | :---: | :---: | :---: | :---: |
| ALL | $2,096,311$ | $2,090,381$ | $2,079,964$ | $2,067,262$ |

| NON-SEASONAL FULL-TIME PERMANENT | $1,854,266$ | $1,845,282$ | $1,837,038$ | $1,831,723$ |

AVERAGE SALARY

| EMPLOYMENT TYPE | DEC2012 | MAR2013 | JUNE2013 | SEP2013 |
| :--- | :---: | :---: | :---: | :---: |
| ALL | $\$ 76,908$ | $\$ 76,910$ | $\$ 77,002$ | $\$ 77,530$ |
| PERMANENT | $\$ 77,870$ | $\$ 77,803$ | $\$ 78,231$ | $\$ 78,619$ |
| FULL-TIME | $\$ 77,833$ | $\$ 77,861$ | $\$ 77,793$ | $\$ 78,353$ |
| FULL-TIME NON-SEASONAL | $\$ 78,263$ | $\$ 78,467$ | $\$ 78,230$ | $\$ 78,756$ |
| FULL-TIME PERMANENT | $\$ 78,331$ | $\$ 78,290$ | $\$ 78,658$ | $\$ 79,028$ |
| NON-SEASONAL FULL-TIME PERMANENT | $\$ 78,683$ | $\$ 78,823$ | $\$ 79,049$ | $\$ 79,374$ |

Naturally, the counts descend as the employment type becomes more specific. The broadest definition is, of course, All Employees. The most restrictive is NSFTP; nonetheless, filtering to NSFTP omits only around 235,000 employees, a relatively small portion of the two million plus employees in total. Salary, on the other hand, rises as the

[^0]category becomes more specific. This increase is not attributable to part-time and non-seasonal employees working limited hours, because salary statistics are annualized. The increase is actually the result of differences in occupation and qualification. Recognizing the employment category on each OPM data request or report and understanding the differences among these categories is especially important when comparing data that have different employment filters.

## Trends in Employment

In addition to the effect of the type of employment, the timing of employment has a strong influence on various statistics. Of course, employment will vary from year to year, depending on a number of factors. Often overlooked is the predictable pattern hiring follows within a year. See FIGURE 1. SEASONALITY OF EMPLOYMENT and FIGURE 2. SEASONALITY OF SALARY to view the seasonal effects on employment and salary, respectively.

FIGURE 1. SEASONALITY OF EMPLOYMENT
Statistics for all types of employment from all quarters of FY2013

FIGURE 2. SEASONALITY OF AVERAGE SALARY
Statistics for all types of employment from all quarters of FY2013

Although these charts examine only one fiscal year, the trends they display persist for most fiscal years. As with employment type, observing the quarter from which OPM data came and knowing these typical within-year trends are important in making proper inferences.

## Common Practices of DAG

DAG is the group responsible for, among other things, producing official statistics on Federal civilian employment. The way in which DAG approaches most data requests is important to note. Foremost, unless otherwise requested, DAG filters statistics to NSFTP employees. As can be seen in the figures above, NSFTP counts are the least susceptible to seasonal variation, and, keeping in mind there is normally an annual pay increases in January, NSFTP salaries are the most constant within a year. The implication is that NSFTP statistics offer the best quarter-to-quarter comparisons. The data in the following section are restricted to NSFTP. Furthermore, as mentioned above in a footnote, the data are also restricted to employees in pay status (employees receiving a paycheck), a restriction DAG always observes. Lastly, the data in the section below represent the Fiscal Year, which, in the Federal Government, ends on the $30^{\text {th }}$ of September. In many tables, a column or row may be headed "FY2013," for example. For Status data, FY2013 represents the composition of the Federal Government on September 30, 2013. For Dynamics data (only the "Action" Tables and Graphs), FY2013 is the compilation of all personnel actions between October 1, 2012 and September 30, 2013. The logic repeats for any Fiscal Year.

## Data

## Framing the Federal Population

Context is a good place to start. Just how large is the Federal employee population? To relate the size of the Federal civilian workforce to the U.S. as a whole, the first data presented in this section compare the Federal population to the national population. TABLE 2. NSFTP POPULATION COMPARISON provides some basic statistics.

TABLE 2. NSFTP POPULATION COMPARISON
Federal counts restricted to non-seasonal full-time permanent employees from fourth quarter since FY2009

| AGENCY | FY2009 | FY2010 | FY2011 | FY2012 | FY2013 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| TOTAL U.S. POPULATION* | $306,771,529$ | $309,326,225$ | $311,587,816$ | $313,914,040$ | $316,159,818$ |
| NSFTP FEDERAL EMPLOYEES | $1,757,105$ | $1,831,719$ | $1,856,580$ | $1,850,311$ | $1,831,723$ |
| NSFTP FEDERAL EMPLOYEES PER 1,000 AMERICANS | 5.728 | 5.922 | 5.958 | 5.894 | 5.794 |

The table shows the Federal NSFTP population and the total United States population since $2009^{2}$. It is important to note that this table considers the entire U.S. population, not simply the labor force or workforce.

The OPM houses only Federal civilian employment data. For total population figures, visit the Census Bureau website (the source of some information in Table 2) at http://www.census.gov/. For employment information, extending beyond the Federal civilian portion, visit the Bureau of Labor Statistics (BLS) website at http://www.bls.gov/. The BLS tracks labor force participation, price indices, and similar information. Census and BLS data are in no way linked to OPM data.

## Commonly Requested Data, Fiscal Year 2013

Counts by agency are the most common data requests DAG receives. The OPM databases consist of about 120 Federal agencies, ranging from single-digit to six-digit employee counts. TABLE 3 NSFTP AGENCY provides the counts and percentages of employees by agency for all the Cabinet level agencies. The table also has a category, "ALL OTHER AGENCIES" which contains all non-cabinet level agencies, a little less than $9 \%$ of the federal employment. The percentage is the fraction of agency employees over total Federal employees. Cabinet-level agencies dominate the percentages, particularly the four military branches as well as The Department of Veterans' Affairs, The Department of Homeland Security, and The Department of Justice.

TABLE 4. NSFTP AGENCY TREND provides counts of Federal employees by Cabinet level agency and fiscal year. The table also has a category, "ALL OTHER AGENCIES" which contains all non-cabinet level agencies. Counts of Federal employees by agency and fiscal year are some of the most commonly requested historical data.

Geography is also frequently requested data. TABLE 5. NSFTP STATE shows counts and percentages of Federal employees by state. At the bottom of the table there is an Unspecified category, which typically denotes errors in reporting. This Unspecified category will appear again in many other data tables. It is important to note that the data reflect places of employment, not places of residence.

TABLE 7. NSFTP CBSA provides counts of Federal employees by the ten largest (in terms of Federal employee count) Core Based Statistical Areas (CBSAs) in the U.S. A CBSA is defined as "a geographic area having at least one urban area of population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. ${ }^{\prime 3}$ There are over 950 CBSA in the U.S.

TABLE 8. NSFTP AGE TREND illustrates the age distribution of Federal employees for the last five fiscal years the average age and the quartiles listed in order. The interpretation, for the $25^{\text {th }}$ percentile of FY 2013 is that, $25 \%$ of the Federal workforce is younger than 38.7 years of age; $75 \%$ of the workforce is older than 38.7. The interpretation is the same for the median, which is the $50^{\text {th }}$ percentile, and for the $75^{\text {th }}$ percentile.

In 2006, the Office of Management and Budget switched reporting standards for race; it added an ethnicity indicator (either Hispanic/Latino or Not Hispanic/Latino) and modified the race categories. The result is the categories in TABLE 11. NSFTP ETHNICITY AND RACE. Counts and percentages are included.

The education variable in the OPM databases has over twenty levels. TABLE 13. NSFTP EDUCATION shows a common grouping of those levels. Over 99\% of Federal employees have obtained at least a high school degree; nearly half, at least a college degree. It is important to note that education is not an element regularly updated by agencies. Typically, it is recorded at the time of hire and only at the employees' initiative thereafter. As a result, OPM education statistics should be treated as lower bounds on the true educational attainment of the Federal workforce.

TABLE 14. NSFTP EDUCATION TREND contains counts of Federal employees by education level for the past five fiscal years. It is important to reiterate that education level is recorded at the time of hire and is only updated at the employees' initiative thereafter. As a result, OPM educational attainment statistics should be treated as lower bounds on the true education of the Federal workforce.

TABLE 15. NSFTP LENGTH OF SERVICE TREND illustrates the distribution of Federal employees' lengths of service (LOS) over the last five fiscal years. Table 15, has the average LOS and the quartiles listed in order. Using FY2013 as an example, $25 \%$ of the Federal workforce had been on board fewer than 5.0 years; $75 \%$ of the workforce had been on board for over 5.0 years. The interpretation is the same for the median, which is simply the $50^{\text {th }}$ percentile, and for the $75^{\text {th }}$ percentile.

TABLE 16. NSFTP SALARY TREND illustrates the distribution of Federal employees' salary over the last five fiscal years. The calculations are based on the adjusted basic pay of employees, which is annualized and includes a locality adjustment. In addition to the average, the quartiles are listed in order. In FY2013 for the $25^{\text {th }}$ percentile, $25 \%$ of the Federal workforce makes less than $\$ 52,679$, while $75 \%$ makes more. The interpretation is the same for the median, which is simply the $50^{\text {th }}$ percentile, and for the $75^{\text {th }}$ percentile.

TABLE 17. NSFTP OCCUPATIONAL CATEGORY TREND shows the salaries in Table 16 broken out by occupational category (informally called PATCO) for the past five fiscal years. The categories are essentially Blue Collar versus White Collar, with White Collar broken out into five different categories. Occupation is by far the largest determinant of these categories, but other data elements do come into play. The statistics are interpreted as before and are again based on adjusted basic pay.

## Additional Details

For any data requests, the OPM produces an online data tool, FedScope, which is updated quarterly: http://www.fedscope.opm.gov/. Many of the tables and figures above can be replicated in FedScope, with the option for much more detail. The tool is best operated in Internet Explorer. For all other inquiries, contact DAG through FedStats at FedStats@opm.gov.
