This discusses OPM's rating policy for the 2005 rate year.

List of Rate Attachments

Attachment I- Rate Proposal for Small Carriers

This is the 2005 rate proposal/questionnaire for small carriers. (Page 15)

Instructions for Attachment I

Line-by-line instructions to small carriers for completing Attachment I. (Page 16)

Attachment IA

The Certificate of Accurate Cost or Pricing Data For Small Community Rated Carriers. This is for use only by small carriers whose 2004 income from the Federal group will be \$500,000.00 or more. A carrier contracting official must use the form to certify that the information in the reconciliation documents (Attachments III, IIIA, and IIIB, kept on file at the carrier) is accurate and that OPM can rely on the information as a basis for determining the Federal group's 2005 rates. Note that this document pertains to your 2004 rates. (Page 17)

Attachment II- Rate Proposal for Large Carriers

The rate proposal sheet is for use by large carriers and small carriers whose 2004 income from the Federal group will be \$500,000.00 or more. Large carriers must submit the form to OPM. Small carriers must keep II and IIA on file and submit IIB and IIC and large carriers should submit all four documents. (Page 18)

Instructions for Attachment II

Line-by-line instructions (with examples and discussion) for completing Attachment II (Page 24-30)

Attachment IIA - The Community Rate Questionnaire

It is for use by large carriers and small carriers whose 2004 income from the Federal group will be \$500,000.00 or more. Large carriers must submit it to OPM. Small plans must keep it on file. If you re-type this questionnaire, please be sure that the questions and answers are on only one side of each sheet. (Page 31-42)

Attachment IIB – Carrier Contacts

This requests the names, telephone and fax numbers and the E-mail addresses of two persons we can contact about your rate proposal. All carriers must submit this form to OPM. (Page 43)

Attachment IIC – Utilization Data

This requests utilization data (based on the carrier's total enrollment) for prescription drug, hospital, and office visit benefits. All carriers must submit this form to OPM. (Page 44)

General Policy For the 2005 Rate Year

Definition: We divide carriers into two groups, "large" and "small." For 2005, we define small carriers as those having less than 1500 FEHBP contracts at the time of the rate proposal. We define large carriers as those having 1500 or more contracts at the time of the rate proposal.

Documentation: The amount and nature of the back-up documentation we require for small carrier rate proposals differs from the large carrier requirements.

For the 2005 rate proposal, a small carrier has three options:

- 1) It may submit the same detailed documentation we require for large carriers.
- 2) If its 2004 income from the Federal group will be \$500,000.00 or more, and the carrier does not elect to submit the same documentation as a large carrier, the carrier must submit Attachments I, IA, IIB, and IIC. Such a carrier must also complete Attachments II and IIA and keep them on file and available for OPM review.
- 3) If its 2004 income from the Federal group will be less than \$500,000.00 and the carrier does not elect to submit the same documentation as a large carrier, the carrier must submit Attachments I, IIB, and IIC. Such a carrier need not complete or retain Attachments IA, II and IIA.

In what follows, "small carrier" refers to a carrier with fewer than 1500 FEHBP contracts and follows option 2 or 3 above.

All carriers must derive their Federal group rates according to OPM community-rating guidelines. Small carriers whose 2004 Federal group income will be \$500,000.00 or more must complete Attachment II (Proposed Biweekly Net-To-Carrier Rates For the 2005 Rate Year) and Attachment IIA (Community Rate Questionnaire) but should <u>not</u> send these documents to OPM. Such carriers must keep these documents on file, in accordance with the records retention clause of the contract. The OPM auditors will examine the documents during carrier audits, and the OPM Office of Actuaries may also periodically review the documents.

Small carriers whose 2004 Federal group income will be less than \$500,000.00 are not required to complete or retain Attachments IA, II, and IIA.

Since small carriers will not submit detailed documentation, the Office of Actuaries will evaluate the proposed rates by using its reasonableness test. Rates failing this test will be further reviewed. For small carriers whose 2004 Federal group income will be \$500,000.00 or more, the Office of Actuaries may request detailed documentation.

> Special Audits

OPM's Office of the Inspector General (IG) will perform special audits of carriers' 2005 rate reconciliations on a selected basis beginning in May 2005. Although these audits will focus on the 2005 rate reconciliation, the audit staff may need to analyze rate information for the Federal group and other groups for previous years. Keep all documentation used to develop the 2005 rates available for review by the audit staff. (Special audits of the 2004 reconciliations will begin in May 2004).

Policy on Error Reporting

If a carrier discovers that a previous rate proposal and/or reconciliation submitted to OPM is incorrect (e.g., through the discovery of an error or omission), the carrier **must:**

- 1) Notify OPM, and
- 2) Prepare and submit to OPM an amended proposal and/or reconciliation (including a newly executed Certificate Of Accurate Pricing).
- > Note: The above policy does not apply to proposals and/or reconciliations that the IG is auditing.

> New Rating Areas

If you propose a rate for a new area (or to split a current area), please submit a letter explaining:

- why you have decided to add this area;
- how it relates to your previous service area (for example, is the new area a portion of an existing area that has been split into two or more sections?); and
- how your current enrollment will be affected by the addition of this new area.

Similarly Sized Subscriber Groups (SSSGs)

The purpose of the SSSG concept is to ensure that the Federal group receives an equitable and reasonable rate.

Definition of Purchasing Alliances

Purchasing Alliances are any groups bonding together to purchase health insurance. Purchasing Alliances are considered employee groups and may be SSSGs.

> Regulatory Definition

48CFR 1602.170-13 defines SSSGs as follows:

- (a) Similarly sized subscriber groups (SSSGs) are a comprehensive medical plan carrier's two employer groups that:
 - (1) Have a subscriber enrollment closest to the FEHBP subscriber enrollment as of the date specified by OPM in the rate instructions; and
 - (2) Use any rating method other than retrospective experience rating; and
 - (3) Meet the criteria specified in the rate instructions issued by OPM.

"Subscriber enrollment" refers to contract enrollment. This could be the total self and family contract enrollment, or the total self, couples, and family contract enrollment, or some other sum, depending of the rate structure of the group.

(b) Any group with which an FEHB carrier enters into an agreement to provide health care services is a potential SSSG (including separate lines of business, government entities, groups that have multi-year contracts, and groups having point of service products).

Exceptions to the general rule stated in paragraph (b) of this section are (and the following groups must be excluded from SSSG consideration):

- (1) Groups the carrier rates by the method of retrospective experience rating;
- (2) Groups consisting of the carrier's own employees;
- (3) Medicaid groups, Medicare groups, and groups that have only a stand alone benefit (such as dental only); and
- (4) A purchasing alliance whose rate-setting is mandated by the State or local government.

The following groups are added to section (b) and must be excluded from SSSG consideration:

- (5) A new group (e.g., a group the carrier first contracts with between July 2, 2004 and July 1, 2005);
- (6) Any group the carrier is contracting with for the second year (starting its second year between July 2, 2004 and July 1, 2005) that would be rated using adjusted community rating but does not have complete data for ACR rating;
- (7) Provider Partners Employer Groups in which the carrier has a financial interest or there is a risk sharing arrangement;

An example is a health plan covering employees of a hospital that contracts with the plan.

- (8) Any employer group with at least a 100 percent increase in enrollment within the last 12 months; and
- (9) A purchasing alliance in which every employer in the alliance has less than 100 enrollees.
- (c) OPM shall determine the FEHBP rate by selecting the lower of the two rates derived by using the two rating methods consistent with those used to derive the SSSG rates.

New Rules On SSSG Selection

Beginning for the 2005 rate year we are revising our rules for choosing SSSGs to provide a stable group of potential SSSGs.

For the 2005 rate year a plan will look at the most current FEHB enrollment available (but no later than May 31, 2004) to choose the potential SSSGs. The plan will find all employer groups which are potential SSSGs and have an enrollment that is a) greater or equal to 90 percent and b) less than or equal to 110 percent of the FEHP enrollment. If the number of these groups is five or more those groups will be the potential SSSGs. If the number of these groups is less than five, the next groups closest in size to the Federal Group will be added to make a total of five. Only these groups will be potential SSSGs. We require at least five groups but there could be many more.

Two examples follow:

Example 1

The FEHB contracts with ABC HMO. The other employer groups ABC HMO contracts with are as follows:

Example 2

<u>Group</u>	<u>Enrollment</u>	<u>Group</u>	Enrollment
FEHB	1000	FEHB	1000
A	800	A	650
В	920	В	700
C	940	C	800
D	980	D	950
E	1005	E	1010
F	1040	F	1090
G	1075	G	1150
H	1092	Н	1220

I	1300	I	1250
J	1400	J	1500

In example I, groups B, C, D, E, F, G and H and all have enrollment greater than 900 (90 percent) and less than 1100 (110 percent) of FEHB's enrollment of 1000. Since there are at least five, these will be the only potential SSSGs.

In example 2, groups D, E, and F all have enrollment greater than 90 percent (900) and less than 110 percent (1100) of FEHP's enrollment of 1000. To get at least five groups we need to add the next two closest in size groups. These are C with enrollment 800 and G with enrollment 1150. These five will be the potential SSSGs.

We will ask for this information at the time of the rate proposal.

Enrollment and Contract Renewal Dates

For the 2005 rate year, the specific guidelines for SSSGs are as follows:

- (1) All group enrollments including new groups (the Federal group and the SSSG enrollments) should be the latest 2005 enrollment available to the carrier (but no later than March 31, 2005).
- (2) The contract renewal date for 2005 SSSGs should be between July 2, 2004 and July 1, 2005. Note: You should interpret "renewal date" to mean the date on which a rate change (if any) is effective for the SSSG.

Note: If an SSSG's rate is extended beyond twelve months (i.e. the carrier allows an SSSG to change its renewal date), a premium adjustment must be made for the SSSG in the following year, or the rate extension will be considered as a discount.

Definition of a Rating Region

A rating region is the total area over which the carrier controls its rates. This is usually the state.

Example 1

HMO ABC operates in Pennsylvania and has two separate rating entities HMO ABC Pittsburgh and HMO ABC Philadelphia. Pittsburgh and Philadelphia determine rates for groups within their area only. Therefore, Pittsburgh is HMO ABC Pittsburgh's **rating region** and Philadelphia is HMO ABC Philadelphia's **rating region**.

Example 2

HMO DEF operates in Florida. It has five separate rating codes throughout the State of Florida. HMO DEF controls the rates for each rate code. Therefore, the State of Florida is the **rating region.**

> Rules for the Number of SSSGs

A carrier must choose two SSSGs for every unique Federal rate code. You should choose both SSSGs from groups that have at least 5 percent of their enrollees in the federal group's rate code area. Total enrollment is defined as enrollment in a rating area. It is possible that a carrier could have federal enrollees in several different geographical regions or states under the same rate code. We will choose the SSSGs as shown previously.

Policy and Selection of SSSGs

We will use a potential SSSGs local enrollment within a rating region to decide if a group is an SSSG. If we determine that a group is an SSSG the rating methodology within the rating region will be used to determine any discounts.

The following examples illustrate the above policies.

Case 1 One State, one Federal rate code area, one rating region, and all groups are in one State:

The carrier operates in the State of Texas. The FEHBP has one rate code area in Texas. Two SSSGs are required. The carrier controls the rates for all of Texas. Therefore, Texas is the rating region. All the groups the carrier contracts with are in Texas. The total enrollment in Texas for each group that has at least 5 percent of its enrollment in the Federal rate code area should be compared with the FEHBP enrollment to decide if the group is an SSSG.

Case 2 One State, two Federal rate code areas, one rating region, and all groups are in one State:

The carrier operates in the State of Texas. The FEHBP has two rate code areas in Texas: one in Dallas and one in Houston. Two SSSGs are required for each Federal rate code area. The carrier controls the rates for all of Texas. Therefore, Texas is the rating region. All the groups the carrier contracts with are in Texas. If at least 5 percent of the total enrollment of a group is in the Federal Rate code area in Dallas, then carrier should use the total enrollment of that group in Texas. The carrier should compare the group's enrollment in Texas with the FEHBP enrollment in Dallas to determine if a group is an SSSG for the Dallas rate code area. Carrier follows the same procedure to select SSSGs in Houston.

Case 3 One State, two Federal rate code areas, two rating regions, and all groups are in one State:

The carrier operates in the State of Texas. The Dallas region controls rates in Dallas. The Houston region controls the rates in Houston. Therefore, there are two rating regions in Texas. The FEHB has two rate codes in Texas: one in Dallas and one in Houston. Two SSSGs are required for each Federal rate code area. The carrier contracts with the XYZ group in Texas. If 5 percent of the total XYZ Group enrollment in the Dallas rating region is in the Federal rate code area in Dallas, then the carrier should use the total XYZ Group enrollment in **Dallas**. The carrier should compare the group's enrollment **in Dallas** with the FEHBP enrollment in **Dallas** to determine if the group is an SSSG for the **Dallas** rate code area. The XYZ Group's rates in Dallas will be used to determine any discounts. Carrier follows the same procedure to select SSSGs in Houston. The XYZ group may be an SSSG in Houston based on its enrollment there.

Case 4 One State, one Federal rate code area, one rating region, and some groups are in more than one State:

The carrier operates in the State of Texas. The FEHBP has one rate code area in Texas. Two SSSGs are required. The carrier controls the rates in Texas. Therefore, Texas is the rating region. The carrier contracts with XYZ Corporation, which has enrollees in Texas and nine other states. If at least 5 percent of the total XYZ Corporation enrollment in Texas is in the Federal rate code area, then carrier should use the total XYZ Corporation enrollment in Texas to compare with the FEHBP enrollment in Texas to determine if a group is an SSSG. The XYZ Corporation's rates in Texas will be used to determine any discounts.

Case 5 One State, two Federal rate code areas, one rating region, and some groups are in more than one State:

The carrier operates in the State of Texas. The FEHBP has two rate code areas in Texas: Dallas and Houston. Two SSSGs are required for each Federal rate code area. The carrier controls the rates in Texas. Therefore, Texas is the rating region. The carrier contracts with XYZ Corporation, which has enrollees in Texas and nine other states. If at least 5 percent of the total XYZ Corporation enrollment in Texas is in **Dallas**, then carrier should use total XYZ Corporation enrollment in **Texas**. The carrier should compare the group's total enrollment in Texas with the FEHBP enrollment in **Dallas** to determine if a group is an SSSG for the **Dallas** rate code area. The XYZ Corporation's rates in **Texas** will be used to determine any Dallas discount. Carrier follows the same procedure to select SSSGs in Houston.

Case 6 One State, two Federal rate code areas, two rating regions, and some groups are in more than one State:

The carrier operates in the State of Texas. The Dallas region controls rates in Dallas. The Houston region controls the rates in Houston. Therefore, there are two rating regions in Texas. The FEHBP has two rate code areas in Texas: one in Dallas and one in Houston. Two SSSGs are required for each Federal rate code area. The carrier contracts with XYZ Corporation, which has enrollees in Texas and nine other states. If at least 5

percent of the total XYZ Corporation enrollment in the **Dallas rating region** is in the Federal rate code area in **Dallas**, then the carrier should compare the total XYZ Corporation enrollment in **Dallas** with the FEHBP enrollment in **Dallas** to determine if a group is an SSSG for the Dallas rate code area. The XYZ Corporation's rates in **Dallas** will be used to determine any discounts. Carrier follows the same procedure to select SSSGs in Houston.

Case 7 Two States, one Federal rate code area, one rating region, and groups are in two States:

The carrier operates in two States Texas and Arizona. The rate code is the same for all enrollees. The rating region is Texas and Arizona combined. All the groups the carrier contracts with are in Texas and Arizona. The total enrollment for each group that the carrier contracts with in Texas and Arizona that has at least 5 percent of its enrollment in the Federal rate code area should be compared with the FEHBP enrollment to decide if the group is an SSSG. The group's rates in the two states will be used to determine any discounts.

Case 8 Two States, one Federal rate code area, one rating region, and some groups are in more than two States:

The carrier operates in two States Texas and Arizona. The rate code is the same for all enrollees. The rating region is Texas and Arizona. The carrier contracts with the XYZ Corporation, which serves ten states. Two of the ten states are Texas and Arizona. If 5 percent of the total XYZ Corporation enrollment in Texas and Arizona combined is in the Federal rate code area, the carrier should compare the total XYZ Corporation enrollment in Texas and Arizona with the FEHBP enrollment in Texas and Arizona to determine if a group is an SSSG. The XYZ Corporation's rates in Texas and Arizona will be used to determine any discounts.

This reflects our view that group size influences rate negotiations.

➤ Instructions for Groups Contracting with Purchasing Alliances

You should treat a Purchasing Alliance (as defined on page 5) as one group and follow the above rules for choosing SSSGs. If a Purchasing Alliance turns out to be an SSSG and consists of more than one rate, use the weighted average of the rates to determine any discounts.

> Instructions for Total Replacement Groups Qualifying as an SSSG

An employee group is a total replacement group when the plan is the only health insurance provider for that employer. For a total replacement group we will not view the first 2 percent discount on their rates as a discount that will have to be given to the Federal Group if it is the carrier's policy to adjust the rates of all total replacement groups by the indicated discount. If some of the replacement groups are given non standard or preferential discount this policy will not apply.

Consistency of Rating Methods

We normally expect the carrier to use the same rating method for the Federal group as it uses for the SSSGs. We accept different rating methods in some situations. If, however, the carrier rates an SSSG inconsistent with the carrier-established policies, the Federal group is entitled to a discount based on the SSSG rating method applied to the Federal group.

> Special Adjustments to SSSG rates

We will accept adjustments to rates of SSSGs based on estimated new business if the carrier can give a reasonable justification, the method is not intended to give a discount and it is the carrier's policy to make such adjustments.

The following are two examples of acceptable justifications:

- 1. Closure of competitive HMOs in the SSSG's area.
- 2. Mergers or Divestitures.

Examination of Non-SSSG Groups

At times, OPM may examine the rates of non-SSSG groups. The examination is to verify the equivalence of the Federal group and SSSG rates. For example, if an SSSG had a special benefit (e.g., dental benefit) not included in the Federal group benefit package, OPM would compare what the carrier charged the SSSG with what it charged other groups for the benefit. The purpose would be to verify that the SSSG received no hidden discount.

An OPM review of a non-SSSG commercial group does not make it a potential SSSG.

Policy on Recovery of Discounts

In the past, if a plan had a policy to recoup a discount made to an SSSG, the FEHBP's current rates may not have included that discount. We are changing that policy. The FEHBP must receive the discount in the rate reconciliation the same year the SSSG received a discount. If the discounted funds are recovered from an SSSG, the plan can recoup these funds from the FEHBP as they become available in the reserves. The plan must show that the discount was actually recovered from the SSSG.

Unless OPM agrees in writing, discounts should be applied to Attachment III's line 5 rates.

> Miscellaneous Remarks

The Federal group's rates must be equivalent to the lower of the two SSSG rates, including any discounts and reflecting any market advantage (discount) given to an SSSG.

Since you are a community rated carrier, the rates for most groups are probably based on an underlying "community rate". Carriers using ACR normally base a group's rates on the underlying experience for that group.

Regardless of which community rating method the carrier uses (TCR, CRC or ACR), OPM now focuses on the rating method used for the two SSSGs to determine if a carrier's Federal group rates are appropriate.

> State Taxes

5 U.S.C. 8909(f)(1) prohibits the imposition of taxes, fees, or other monetary payment, directly or indirectly, on FEHBP premiums by any State, the District of Columbia, or the Commonwealth of Puerto Rico or by any political subdivision or other governmental authority of those entities. If your Attachment II, Line 1 rates include an amount to recover such monies from the FEHBP, you should make an adjustment for this amount in the form of a negative special benefit loading in the Special Benefit Loadings section of Attachment II.

> Special Loading for Enrollment Discrepancies

Your contract provides for a special premium loading of 1 percent to account for unresolved enrollment discrepancies.

Note: The carrier must explicitly take this loading, but may eliminate its effect by also giving the Federal group a discount. The carrier should keep in mind that its contract with the FEHBP states in Section 3.6(b) "the Carrier accepts the adjustment to the subscription charges in full resolution of all obligations of the Government in connection with the subscription payments as described in this section 3.6 and waives any rights it may have to claims for subscription payments under Section 3.1(a)."

You should place this loading on Line 4e of Attachment II.

Community Rating Policy

We accept three standard methods of community rating:

- 1) Traditional Community Rating (TCR)
- 2) Community Rating By Class (CRC)
- 3) Adjusted Community Rating (ACR)

We expect carriers using TCR or CRC for 2005 to develop rates from a community-based revenue requirement (normally in the form of a capitation rate) which is documented and verifiable. Once you establish the capitation rate, you may convert it to self and family rates using your standard procedures.

A carrier using ACR may use a method based on utilization data or it may use a prospective method based on actual Federal claims data.

We ask you in the Community Rate Questionnaire to provide the criteria you use to determine your rating method for the Federal group.

CRC Rating

A carrier using CRC for the Federal group must provide a standard presentation of its rating method. The document "Instructions For Attachment II" includes details of this standard format and an example illustrating it. If a carrier using CRC cannot comply with OPM's standard format, it must submit its rate manual and/or other official documents that demonstrate the actuarial soundness of the carrier's CRC method.

We accept age and sex as legitimate factors for CRC. You must support any other proposed factor with carrier documentation showing that the factor predicts utilization. Our policy for industry factors is explained in "Instructions for Attachment II", page 25.A large carrier using CRC must furnish a table showing the age-sex distribution on which it based the Federal group's CRC adjustment factor. You must clearly show how you used this table to derive the adjustment factor.

Carriers using TCR or CRC and demographic factors (such as family size) based on group-specific data must also use group-specific data for the SSSGs. You must base all demographic factors on actual in-force group data.

ACR Rating

The following rules apply for carriers using ACR for the Federal group:

- 1) The carrier must have a documented ACR method established and implemented by 2004.
- The carrier may use a prospective method based on actual Federal claims data, or a method based on utilization data. In either case, the carrier must keep on file all data necessary to justify the ACR rate (i.e., claims, utilization etc.) This data is subject to review and audit by the Office of the Inspector General.

If you use ACR, you must completely and clearly explain your method. We may ask for additional documentation from carriers using ACR, including the carrier's rating manual.

The document "Instructions for Attachment II," includes specific rules for carriers using a claims based ACR method.

2005 RATE PROPOSAL - SMALL CARRIERS (Use BIWEEKLY Net-To-Carrier Rates)		
CARRIER NAME	STATE	CODE
CARRIER NAME	SIAIL	CODE
Q1. What type(s) of community rating do you propose to use for	the Federal gro	up in 2005?
TCR (Traditional Community Rating)		
CRC (Community Rating By Class)		
ACR (Adjusted Community Rating)		
	SELF	FAMILY
Q2. What are your carrier's 2005 proposed Federal group		
rates? (For small carriers whose 2004 Federal group		
income will be Greater than or equal to \$500,000, these rates		
are on Line 5, Attachment II.)		
Line A:		
Q3. What adjustments have you made to the proposed 2005		
rates as the result of the reconciliation of the 2004 rates?		
(Note that if the actual 2004 rates turned out to be higher than		
the rates estimated in the 2004 proposal, you should increase		
the 2005 rates to recover the loss. Likewise, if the actual rates		
were overestimated, you should decrease the 2005 rates to		
return the gain to OPM.)		
Line B:		
Q4. What are the proposed 2005 Federal group rates (after		
adjustments)? (Line A ± Line B)		
Line C:		
OPM will complete the section below if it is necessary to reduce draw down the contingency reserved.		ates in order to
Amount of excess contingency reserve:		
Rate reduction necessary to generate a contingency reserve		
payment approximately equal to the excess.		
Line D:		
2005 FEHBP Rates:		
Line E:		

Q1. Indicate which method of community rating the carrier uses. Small carriers may use any of the following methods: Traditional Community Rating (TCR), Community Rating By Class (CRC), or Adjusted Community Rating (ACR).

We do not require small carriers to submit detailed documentation of the rate development. But please keep in mind that if your 2004 income from the Federal group will be greater than or equal to \$500,000, you must complete Attachments II and IIA, and keep them on file, before submitting Attachment I. The OPM audit staff will examine the documents during periodic audits of the carrier. The Office of Actuaries may also periodically review the documents.

- **Q2.** Insert the rates that appear on Line 5 of Attachment II. These rates are the rates before any adjustments have been made as the result of the 2004 reconciliation.
- Q3. If OPM owes the carrier money because of the 2004 reconciliation, OPM will pay that money through an increase in the carrier's 2005 rates. Compute the appropriate increase, based on the results of the reconciliation.

In the case where a small carrier owes OPM because of the reconciliation, the carrier's 2005 rates will be decreased by an appropriate amount.

The rate adjustments obtained by the carrier should be placed on Line B.

Q4. If the amounts on Line B are rate increases, then Line C = Line A + Line B. If the amounts on Line B are rate decreases, then Line C = Line A - Line B.

OPM completes the section below Line C based on negotiations between the carrier and Office of Actuaries. When we determine that sufficient excess has built up in the contingency reserve, we will propose a reduction to the carrier's rates in order to generate a contingency reserve payment.

Certificate of Accurate Cost Or Pricing Data For Community Rated Carriers

This is to certify that, to the best of my knowledge and belief:

- The cost or pricing data submitted (or, if not submitted, maintained and identified by the carrier as supporting documentation) to the Contracting Officer or the Contracting Officer's representative or designee in support of the 2004 FEHBP rates were developed in accordance with the requirements of 48 CFR Chapter 16 and the FEHBP contract and are accurate, complete, and current as of the date this certificate is executed; and
- 2) The methodology used to determine the FEHBP rates is consistent with the methodology used to determine the rates for the carrier's Similarly Sized Subscriber Groups.

Backup Children's Loading For	m
A. Family Rate (Line 3 of Attachment III)	
B. Self Rate (Line 3 of Attachment III)	
C. Children's Rate { A - (2 x B) } 1	
D. Children are insured up to what age?	
E. Years Extended { 22 - D Years }	
F. Do you cover Full Time Students?	
G. Loading Factor (Enter .2 if you answered 'yes' to F, .55 if you answered 'no')	
H. Children's Loading (apply to Family Rate) C x E x G =	

▶ 1 - If the actual biweekly cost per child is known, and the average number of children per family is known, the children's rate may be computed by multiplying the two figures together. In general, if you can compute the overall rate for children in a more accurate way than that suggested, use that result in line (C).

Line By Line Instructions

The following gives a line-by-line explanation of how to fill out the reconciliation sheet. Item numbers correspond to line numbers on Attachment II.

1. Proposed FEHBP Rates - 2005

This is the most significant part of the proposal process. Please do it carefully. Refer to the Line I instructions on page 25.

2. Special Benefit Loadings

Refer to the instructions on page 28.

3. FEHBP Rates Plus Special Loadings

The sum of Lines 1 and 2

4a. Extension of Coverage Loading

If you are entitled to this loading, multiply Line 3 by .004 (or the same factor you used in the proposal).

4b. Medicare Loading

Refer to the instructions on Page 28.

4c. Children's Loading

Refer to the instructions on page 30.

4d. Subtotal

Add lines 3, 4(a), 4(b), and 4(c)

4e. Enrollment Discrepancies Loading

This is a 1 percent load to the rates which compensates the carrier for possible enrollment discrepancies.

5. Proposed FEHBP Rates - 2005

Add lines 4(d) and 4(e).

Backup: Line 1 Form Instructions

This should be the carrier's best possible estimate of the 2005 FEHBP biweekly self and family rates. These rates must be based on the carrier's community rate(s) or on an OPM approved ACR methodology. You must indicate in detail how you arrived at the Line 1 rates. We provide work spaces for this in Attachment IIA, the Community Rated Questionnaire.

Carriers may use "Traditional Community Rating" (TCR), "Community Rating By Class" (CRC), or "Adjusted Community Rating" (ACR), which allows the carrier to base its rate for a group on the projected revenue of that group.

Traditional Community Rating

If you use TCR for the Federal group, the starting point is normally a capitation (per member/per month) rate. This capitation is then converted to a self rate and a family rate. The conversion process may involve group specific demographic adjustment factors. The carrier must provide the details of this conversion process.

We allow variations in the process that are consistent with OPM principles of community rating. For example, a carrier might choose to use a standard set of two-tiered rates for all its groups.

Community Rating By Class

If you use CRC for the Federal Group, we require a standard presentation of the rating method. The presentation assumes that the carrier begins with an overall per member/per month rate (capitation). As in the case of TCR, we accept minor variations that are consistent with OPM principles of community rating.

Industry Factors

Our policy on industry factors is as follows:

- 1) The industry factor used for the Federal group in the rate proposal must be 1.0 or less. The proposed factor may change in the reconciliation, but in no case can it be larger than 1.0.
- 2) We will examine the industry factors used for the SSSGs. We require that the Federal group industry factor must be no larger than the lowest industry factor used for an SSSG and 1.00 or less.

Example Of CRC Method

If a carrier uses CRC, we require a method, which is essentially as follows:

1. Derive a CRC adjustment factor (AF), which is used to adjust the capitation rate. Normally, you should base this adjustment factor on the age-sex distribution of the Federal group, although we do allow certain variations of this concept.

- 2. Determine the adjusted capitation rate for the Federal group (AF x capitation).
- 3. Convert the adjusted capitation rate to self and family rates using the same method that would be used under TCR.

Example:				
		Percentag		Relative Utilization
	Class	Distribution of M	Iembers	Factor
	1	.10		.40
	2	.20		.80
	3	.45		1.20
	4	.25		1.60
AF = (.10)	x.40) + (.2)	$20 \times .80 + (.45 \times 1.2)$	$(0) + (.25 \times 1.60) =$	= 1.14
	Capita	tion	= \$60.00 pm/pm	l .
	Adjust	ed Capitation	=\$60.00 x 1.14	= \$68.40
	1st Le	vel Step-Up Factor	= 1.2	
	2nd Le	evel Step-Up Factor	= 2.9	
	Self R	ate	=\$68.40 x 1.2	= \$ 82.08
	Family	Rate	=\$82.08 x 2.9	= \$238.03
	ramily	Kate	$= 82.08×2.9	= \$238.03

Note The Following:

- 1) You must include your CRC worksheets (i.e. sheets showing the relative utilization factors and the age/sex distribution for the Federal group) in your submission.
- 2) The relative utilization factors used for the federal group must be the same as those used for all your other CRC-rated groups.
- 3) Federal annuitants over age 65 should normally not be included in the calculation of the CRC factor.
- 4) A carrier using CRC for the Federal group should compute a Medicare loading in the normal way (i.e. along the lines of OPM's suggested method on Page 28).

Adjusted Community Rating

A carrier using ACR for the Federal Group may use a method based on utilization data or a prospective method based on actual Federal claims data. In either case, the carrier must keep on file all data necessary to justify the ACR rate (i.e. claims, utilization, etc.) You should save backup tapes of your claims database for audit purposes.

The rules that apply for a claims-based ACR method are:

- 1) The experience period (and the claims used within that period) may not change in the reconciliation. It must be the same period (and the same claims) you used in the proposal.
- 2) If you used completion factors to convert paid claims to incurred claims, such factors must be the same for all groups for which you used a claims-based ACR method.
- 3) Any method used to convert paid claims to incurred claims should be consistent for all groups you rated by a claims-based ACR method.
- 4) If claims include special benefit claims, you should take no special benefit loadings (either in the proposal or reconciliation). Note that the claims should reflect extension of coverage, which means that you should not take the extension of coverage loading.
- 5) If claims include those of annuitants age 65 and over, you must reduce claims by an amount equal to Medicare income from the Centers for Medicare or Medicare Services (CMS) or we must receive a credit for monies received from CMS. See questions Q19 and Q20.
- 6) Loadings for administrative expenses must be either:
 - a) a flat community rated pm/pm amount or
 - b) a standard percentage of claims.
 - c) A method consistently applied to the FEHBP and the SSSGs.
- Any trend factor used for the Federal group must be the same as the trend factor the carrier used for other groups (that is, you may not base a trend factor for the Federal group on the Federal group's experience).

A carrier using ACR for the Federal group may also use a method based on utilization data.

WE EXPECT A CLEAR AND COMPLETE EXPLANATION OF YOUR ACR METHOD, WHETHER A CARRIER USES AN ACR USING FEDERAL CLAIMS DATA, OR UTILIZATION DATA. YOU SHOULD PRESENT THIS EXPLANATION AS YOUR RESPONSE TO VARIOUS QUESTIONS IN ATTACHMENT IIA.

A carrier using TCR or CRC should normally base the Line 1 rates on its estimated capitation rate (or equivalent) for 2005. At a later date, after you determine the actual January 1, 2005, capitation rate, you will do a rate reconciliation.

Note that if a carrier uses an ACR method based on Federal claims data, its reconciliation will

differ very little from the proposal. The only elements of the reconciliation that might differ from the proposal are:

- (i) **Trend Factor.** Your trend factor must be revised from that proposed if necessary to comply with the requirement that the trend be community based.
- (ii) **Administration Cost Factor.** Your factor must be revised if necessary to meet the requirement that the FEHBP be charged the lowest loading (either capitation or percentage) charged to an SSSG.

Note that the trend factor must be consistent with the lowest such factor used for an SSSG.

Backup: Special Benefits Form Instructions

These loadings are for differences between Federal group's benefit package and the carrier's community benefits package. You must provide all backup calculations for the costs that appear on lines 2(a) through 2(c). You should clearly indicate all utilization and cost assumptions. If the benefit is a rider that you sell to other groups, there should be a uniform price (i.e., a capitation rate, or standard set of two-tiered community rates) for the benefit. Indicate clearly in your backup calculations the adjustments (if any) you have made to the uniform rate to arrive at the Federal rates shown on lines 2(a) through 2(c).

You should offset through negative loadings any benefits not provided to the Federal group which are part of the basic package. You should enter a cost of \$0.00 for benefit differences with no cost.

> Backup: Potential SSSGS Form Instructions

First find the latest FEHB enrollment. Then find all employer groups that are potential SSSGS. Narrow this down to employer groups that have enrollment within 10 percent of the Federal Group's enrollment. List all those employer groups. If there are less than five, add to the list the groups that are potential SSSGs and have the next closest enrollment to the FEHB's enrollment to make a total of five. These groups and only these groups will be potential SSSGs.

Backup: Medicare Loading Form Instructions

Federal annuitants who retired after December 31, 1983, are entitled to coverage under Part A and Part B of Medicare when they reach age 65. In addition, the majority of retirees over age 65 who retired before 1984 are covered under Medicare as a result of employment in the private sector.

You must document the Medicare status of Federal annuitants and their covered spouses age 65 and over, and compute a Medicare loading.

You should clearly explain your method, and provide backup calculations.

The best source of data for your Medicare distribution is the match tape we send to you each year. However, do not include annuitants from that tape with codes X, Z, or N who are under age 65 in your

count of no coverage. A carrier claiming a Medicare loading must have appropriate documentation to justify the distribution of its Medicare population submitted in Q38.

Note: As explained above, the carrier is either underpaid or overpaid for Federal annuitants and their covered spouses age 65 and older (hereafter referred to as "Federal annuitants"), and this underpayment or overpayment depends on the Federal annuitant's Medicare status.

The purpose of the Medicare loading is to adjust a carrier's premium to provide the correct income for FEHB retirees age 65 and older. Most other groups generally cover their retirees by Medicare Plus Choice Plans or Medicare Supplement Plans and are excluded from the employee plan.

Below is an example of the sort of method we suggest. If, however, you use another method for other groups that is reasonable and well documented, you should also use it for the Federal group.

EXAMPLE: Medicare Coverage	Distribution of Federal Annuitants and Covered Spouses*	Cost of CMS Benefits	FEHBP <u>Premium**</u>	CMS COB	Gain (Loss) to Carrier
A + B	100	\$120	\$50	\$100	\$30
A	65	120	50	60	(10)
В	10	120	50	40	(30)
None	50	120	50	0	(70)

- (1) Revenue Gain: $100 \times $30 = $3,000$
- (2) Revenue Loss: $(65 \times 10) + (10 \times 30) + (50 \times 70) = 44,450$
- (3) Net Loss = \$4,450 \$3,000 = \$1,450
- * From Question 38, Attachment IIA

This positive loading of \$1,450 could be spread over the self and family contracts in any reasonable manner. Note that whether the loading comes out negative or positive depends on the distribution of Federal enrollees by Medicare status.

If you use ACR to compute your rates, you must make sure that you have considered the effect of COB (coordination of benefits) income the carrier received from CMS. You should pay particular attention to Q19 and Q20 of the questionnaire.

Note:

- 1) A carrier using a claims-based ACR method will normally not have a Medicare loading.
- 2) A carrier claiming a Medicare loading must have appropriate documentation to justify.

^{**} If you use this method, the FEHBP premium should be the single rate

the distribution of its Medicare population submitted in Q38.

The HMO must compute the cost of benefits for the Federal annuitants, and compare this with the income it receives on behalf of these annuitants from OPM and CMS. If a plan receives more income than is needed to cover the cost of benefits for this group, the Medicare loading should be negative. If the plan receives less income than is needed, the loading should be positive.

The difference between the cost for these enrollees and revenue received from CMS should roughly equal the premium charged to Medicare enrollees for either Medicare Supplement Plans or Medicare Plus Choice Plans with adjustments made for differences in levels of benefits. Please verify the reasonableness of your loading. We will verify the accuracy of your calculation based on the answers you provide in questions Q35 and Q36

.

Backup: Children's Loading Form Instructions

All carriers in the Federal Employees Health Benefits Program must cover unmarried dependent children until their 22nd birthdays (through age 21). If the carrier has a different age limit for children's coverage, a loading to the Federal family rate may be appropriate.

You may take this loading only if the carrier's normal practice is to take such a loading for all other groups whose age limit for children's coverage differs from the carrier's community standard.

In general, if you included overage dependents in your group-specific demographics (especially the average family size) and use these numbers to create your self and family rates (through step-up factors, etc.), YOU ARE NOT ENTITLED TO A CHILDREN'S LOADING.

We present a "suggested method" format for your convenience. If you have another method, please use it and give the details of your method.

If the actual biweekly cost per child is known, and the average number of children per family is known, the children's rate may be computed by multiplying the two figures together. In general, if you can compute the overall rate for children in a more accurate way than that suggested in line (C) of the suggested method shown on the Form, use that result in line(C).

Enter the loading on line 4c of Attachment II.

	[]YES	[]NO	If NO, explain why you included no negative loading.

Q41.	If you use different rating methods (i.e. TCR, CRC, ACR) for different groups, describe you	ur
	criteria for the use of each method.	

Q42. BACKUP CALCULATIONS - Attachment II, Line 1 Rates

a) If you use Traditional Community Rating (TCR), show how you derive the rates on Line 1, Attachment II of the proposal. If they are two-tiered rates that you use for all groups, and will be backed by an insurance department filing, state this. If you derived the rates by converting a capitation into self and family rates, show the calculations.

If you use Community Rating By Class (CRC) or Adjusted Community Rating (ACR) show any details of the derivation of the Line 1, Attachment II rates that were not given in the previous parts of this questionnaire. DO NOT SKIP THIS QUESTION. WHAT WE WANT HERE IS A SIMPLE NARRATIVE EXPLANATION (BACKED UP BY CALCULATIONS) OF HOW YOU DERIVED THE LINE 1 RATES. IF THERE ARE OTHER SHEETS WITH DETAILED CALCULATIONS, TELL US HERE IN SIMPLE LANGUAGE WHAT IS DONE. ON THOSE SHEETS MAKE CERTAIN THAT THE EXPLANATION IN THIS SECTION MAKES IT CLEAR TO US WHERE THE RATES ON LINE 1 COME FROM.
